CANCER OF THE ORAL CAVITY

INTRODUCTION. Cancer of the oral cavity is one of the most common malignancies, especially in developing countries, but also in the developed world, and squamous cell carcinoma is the most common histology and the main etiologic factors are tobacco and alcohol use. [3] Although early diagnosis is relatively easy, presentation with advanced disease is not uncommon.

Squamous Cell Carcinoma of Oral Cavity

How is Squamous Cell Carcinoma of Oral Cavity Treated? Early diagnosis and treatment of Squamous Cell Carcinoma of Oral Cavity offers the best chance of cure. The goal is to remove all of the tumor, including a margin of normal tissue around it. The surgery to remove the tumor and any affected lymph nodes... [4]

RACGP - Common causes of swelling in the oral cavity

Broadly speaking, oral pathology can present as a mucosal surface lesion (discussed in an accompanying article by these authors). G swellings present at an oral site (subcutaneous masses, tumors, lingual, floor of mouth, palatal and jaw) or symptoms related to teeth (pain, mobility). The last of these presentations has been excluded from this article as it is assumed patients with teeth-related ...
